ABSTRACT OF THE DISCLOSURE

2

METHOD AND SYSTEM FOR LOGGING EVENT DATA

3 A method and system for logging event data from at least one
4 operable application program or at least one peripheral device operably
5 connected to a server using a log manager device driver. The method includes
6 the steps of registering the log manager device driver with the server to receive
7 all the event data from the server, registering the log manager device driver
8 with the server as a log manager file, the log manager device driver receiving
9 the event data, and the log manager device driver responding to a download
10 request for said log manager file from a requesting computer.
